ALEX XIAO

Berkeley, CA | (669) 207-7781 | alexxiao1227@gmail.com | linkedin.com/in/alex-xiao-a17375232 | Portfolio

EDUCATION

University of California, Berkeley *Berkeley, CA*
B.A. Industrial Engineering & Operations Research (IEOR) *Expected May 2028*
Relevant Coursework: Data 8 — Foundations of Data Science; Data C88C — Computer Programming

PROFESSIONAL EXPERIENCE

AI Optimization Intern — Salesforce *Jun 2026 – Aug 2026*

- Engineered and deployed an API-based HackerRank → Google Sheets integration using Google Apps Script, eliminating 36,500 manual clicks and saving ~1,800 hours annually across global recruiting operations in AMER, LATAM, EMEA, and India.
- Conducted an 8-stage workflow audit through 10+ stakeholder interviews and sourcing shadows, identifying operational bottlenecks, redundant system interactions, and opportunities for process automation across global teams.
- Evaluated technical and operational alternatives for a 103-task Asana → email → scheduling workflow, including an Asana-to-Slack Lists integration; recommended streamlined recruiter email routing projected to reduce tasks by ~78%.
- Built and deployed status-triggered automation across production recruiting systems, synchronizing candidate records across 6 subtabs and saving ~5 minutes per candidate while implementing safeguards to preserve recruiter overrides.
- Built and deployed 3 recruiting analytics dashboards covering Builders Program Offers, PM Hiring, and Interview Funnels, providing leadership real-time visibility into operational KPIs, pipeline performance, conversion rates, and offer attainment.
- Authored competitive intelligence and a Campus Ambassador proposal spanning 8 competitors and 6 partner universities, directly informing a budget request presented to CEO Marc Benioff; reprioritized ongoing projects to meet an accelerated executive deadline.
- Selected by VP leadership to develop strategic research across 25 international universities, analyzing recruiting pipeline data, talent markets, and AI curriculum trends to inform organizational planning.
- Proactively identified recruiting workflow improvements through cross-functional stakeholder interviews, recruiter feedback, and process mapping, independently driving optimizations supporting recruiting teams across AMER, LATAM, EMEA, and India.
- Quantified ~75 hours of manual processing across 647+ candidates, identifying operational inefficiencies and establishing the business case for automation and process improvements across recruiting workflows.
- Prototyped AI-enabled workflow solutions using the Claude API and Salesforce Agentforce, translating stakeholder requirements into technical use cases and delivering an AI Recommendation Playbook with a live proof-of-concept agent demonstration.
- Authored 2 reusable Slackbot skills and built a recurring research workflow using refreshed data sources, supporting repeatable automation, process documentation, and ongoing operational planning.

Supply Chain & Procurement Analyst — Nike *Aug 2026 – Present*

- Map Tier 1–4 apparel supplier networks for Cal Athletics, analyzing procurement channels, manufacturing origins, and sourcing dependencies to identify operational risks, supply-chain bottlenecks, and traceability gaps.
- Build multi-criteria supplier decision matrices incorporating cost, quality, lead time, production capacity, geographic resilience, and ESG metrics to evaluate commercial and operational tradeoffs.
- Analyze Nike vendor agreements and factory disclosures to assess supplier data reliability, distinguish procurement channels, and support evidence-based sourcing decisions across complex manufacturing supply chains.
- Model Scope 3 emissions and operational bottlenecks across material composition, manufacturing, and transportation, collaborating with Cal Athletics, Nike, and vendors to develop actionable sourcing recommendations.
- Coordinate with university and vendor stakeholders to evaluate procurement dependencies, manufacturing constraints, and data reliability, translating analytical findings into sourcing strategies and supplier evaluation criteria.

Founding Head of Growth & Regional Product Manager, NorCal — Ditto *Jun 2025 – Mar 2026*

- Led product and growth operations for a consumer matchmaking platform, scaling acquisition to 150,000+ organic users across 15+ U.S. colleges through cross-functional execution, product experimentation, and regional expansion.
- Conducted 25 user interviews and funnel analysis to identify operational and product friction; secured CEO buy-in and scoped an MVP with engineering, increasing date-confirmation rates from 10% to 12% and week-four retention from 20% to 23%.
- Partnered with engineering and design to simplify onboarding from 7 steps to 4, increasing completion rates from 58% to 69% through A/B testing and iterative product improvements.
- Owned product analytics and experimentation dashboards, using performance data to evaluate alternatives, recommend discontinuing an underperforming build, and scale a winning variant that increased first-week engagement from 32% to 38%.
- Tested weekly iMessage match-delivery timing across 2,000 users, increasing match-open rates from 40% to 48% through data-driven experimentation.
- Recruited and managed campus growth and marketing teams across UC Berkeley, UC Davis, UCSB, and UCR, coordinating regional initiatives and turning successful acquisition strategies into scalable operational playbooks.

Certifications: Building with the Claude API, Claude Code in Action (Anthropic, 2026); Google PM Specialization (2025); Salesforce Agentblazer Champion (2026).
Skills: Technical Program Management, Process Optimization, Supply Chain Analysis, Python, SQL, Excel
